OVERALL SUMMARY

Ananta Patil's overall score is 36/100, placing them in the 'At Risk' band. Strengths include a perfect Backlog Health score of 0 (100th percentile), indicating a very fresh backlog. However, Output Velocity is critically low at 0, with a -100% MoM change, and Throughput Consistency is only 5% (29th percentile) due to 27 inactive days. These low scores pose a significant risk to timely delivery and team productivity.

STRENGTHS

- Backlog Health: Achieved a perfect score of 0 (100th percentile), ensuring no aged issues and a healthy pipeline for the team.
- Quality: Achieved a perfect score of 100, indicating all work completed meets the highest standards.

AREAS OF CONCERN

- Output Velocity: A score of 0 and a -100% MoM change indicates a complete halt in issue closure, posing a severe risk to project timelines.
- Throughput Consistency: At 5% (29th percentile) with 27 inactive days, this suggests a lack of consistent daily engagement, impacting predictability and team velocity.

ISSUE-LEVEL DETAIL

KEY	SUMMARY	TYPE	CREATED	RESOLVED	RES. DAYS
			No issues found		

INTERPRETATION

- Output Velocity is 0, indicating no issues were closed in the period.
- The MoM change is -100%, a significant drop from the previous period.
- Ranking in the 57th percentile suggests performance is below average for this metric.

RECOMMENDATION

- Investigate the reasons for zero issues closed, checking for blockers.
- Review Ananta Patil's current workload and task assignments for feasibility.
- Identify and address any impediments preventing issue closure in the next cycle.

KPI: THROUGHPUT CONSISTENCY

Activity Calendar · 1 / 20 active

ACTIVITY HEATMAP

February 2026

Sun	Mon	Tue	Wed	Thu	Fri	Sat
1	2	3	4	5	6	7
8	9	10	11	12	13	14
15	16	17	18	19	20	21
22	23	24	25	26	27	28

Holiday · Leave · 1–2 issues · 3–5 issues · 6+ issues

INTERPRETATION

- Throughput Consistency is 5%, meaning Ananta Patil was active on only 5% of working days.
- Evidence shows 27 inactive days, highlighting a significant lack of engagement.
- This low consistency places Ananta Patil in the 29th percentile, indicating poor daily activity.

RECOMMENDATION

- Discuss the low active days with Ananta Patil to understand the reasons for inactivity.
- Implement a daily check-in or stand-up to encourage consistent Jira updates.
- Set a target for increasing active days to at least 80% in the next period.

KPI: BACKLOG HEALTH

Open Issues by Age

AGING BUCKETS

0–7 days	0
8–14 days	1
15–30 days	0
30+ days	0

ISSUE-LEVEL DETAIL

KEY	SUMMARY	TYPE	CREATED	RESOLVED	RES. I
EI-97	Anomaly detections in dime	Task	2026-02-17	—	0

INTERPRETATION

- Backlog Health is 0%, meaning no issues are currently aged between 0-7 days.
- All open issues are aged 8 days or more, as indicated by the evidence.
- This 100th percentile score signifies a perfectly fresh backlog, with no aging concerns.

RECOMMENDATION

- Continue to prioritize and address issues within the 0-7 day aging bucket.
- Maintain the current focus on resolving incoming tasks promptly to keep the backlog healthy.
- Ensure new tasks are assigned and worked on immediately to prevent aging.

EDUCATIONAL REFERENCE: GUIDE TO METRICS

Metric	Definition	Performance Context
Issues Closed	The total volume of Jira issues successfully resolved within the assessment period.	Measures overall throughput and delivery capacity.
Avg Res. Time	The average number of working days taken to resolve an issue from creation.	Indicates delivery speed and responsiveness.
Output Velocity	A measurement of daily throughput intensity (Issues per Working Day).	Peak performance tiers maintain >0.6 issues/day.
Stability Score	Measures process reliability by tracking bug reopen rates.	High stability (>85%) indicates strong internal quality control.
Consistency	Analyzes the predictability of daily activity patterns.	Ensures steady delivery without disruptive bottlenecks.
Backlog Health	Evaluates the age and distribution of unresolved work.	Focuses on preventing technical debt and stale tasks.
Efficiency Index	A balanced multiplier comparing speed relative to volume.	Optimizes for high-quality, high-speed delivery.
Focus Ratio	Concentration on core development vs supporting tasks.	Helps identify hidden context switching or process overhead.
