LOW ACTIVITY DAYS

OVERALL SUMMARY

Ananta Patil's overall score is 27/100, placing them 'At Risk'. While Backlog Health is a strength at 100%, indicating excellent management of fresh issues, Output Velocity is critically low at 0. Throughput Consistency is also a concern at 10%, with 25 inactive days, posing a risk to consistent delivery and team velocity.

STRENGTHS

• Backlog Health (100%): Demonstrates Ananta Patil's ability to keep the backlog fresh and manageable, ensuring new tasks are addressed promptly.

AREAS OF CONCERN

• Output Velocity (0): This critically low score indicates no issues were closed, posing a significant risk to project timelines and team output.

• Throughput Consistency (10%): With 25 inactive days, this metric highlights a risk of unpredictable delivery and potential delays due to inconsistent engagement.

ISSUE-LEVEL DETAIL

KEY	SUMMARY	TYPE	CREATED	RESOLVED
		No issues found matching your filter		

INTERPRETATION

- Output Velocity is 0, indicating no issues were closed on average per working day.
- The MoM change is -100%, showing a complete drop in closed issues from the previous month.
- Ranking at the 36th percentile suggests this is a significant underperformance compared to peers.

RECOMMENDATION

- Investigate the reasons for zero issues closed, checking for blockers on assigned tasks.
- Review Ananta Patil's current workload and task complexity to identify potential bottlenecks.
- Prioritize closing existing high-priority tickets to improve this metric immediately.

KPI: THROUGHPUT CONSISTENCY

Activity Calendar · 3 / 20 active

ACTIVITY HEATMAP

February 2026

Sun	Mon	Tue	Wed	Thu	Fri	Sat
1	2	3	4	5	6	7
8	9	10	11	12	13	14
15	16	17	18	19	20	21
22	23	24	25	26	27	28

Holiday · Leave · 1–2 issues · 3–5 issues · 6+ issues

INTERPRETATION

- Throughput Consistency is 10%, meaning only 10% of working days had any Jira activity.
- There are 25 inactive days, highlighting significant periods of low engagement.
- The 27th percentile indicates this low activity level is concerning compared to others.

RECOMMENDATION

- Encourage daily Jira updates, even for minor progress, to increase active days.
- Discuss the reasons for 25 inactive days to understand potential engagement issues.
- Set a target to increase active days to at least 70% of working days.

INTERPRETATION

- Backlog Health is 100%, suggesting all open issues are within the 7-day freshness window.
- The aging buckets show 0 issues in the 0-7 day range, which is ideal.
- This high score at the 27th percentile indicates Ananta Patil is managing their backlog effectively.

RECOMMENDATION

- Continue maintaining the current practice of addressing new issues promptly.
- Ensure no new issues slip into older aging buckets by adhering to SLAs.
- Leverage this strength to focus on improving other underperforming metrics.

EDUCATIONAL REFERENCE: GUIDE TO METRICS

Metric	Definition	Performance Context
Issues Closed	The total volume of Jira issues successfully resolved within the assessment period.	Measures overall throughput and delivery capacity.
Avg Res. Time	The average number of working days taken to resolve an issue from creation.	Indicates delivery speed and responsiveness.
Output Velocity	A measurement of daily throughput intensity (Issues per Working Day).	Peak performance tiers maintain >0.6 issues/day.
Stability Score	Measures process reliability by tracking bug reopen rates.	High stability (>85%) indicates strong internal quality control.
Consistency	Analyzes the predictability of daily activity patterns.	Ensures steady delivery without disruptive bottlenecks.
Backlog Health	Evaluates the age and distribution of unresolved work.	Focuses on preventing technical debt and stale tasks.
Efficiency Index	A balanced multiplier comparing speed relative to volume.	Optimizes for high-quality, high-speed delivery.
Focus Ratio	Concentration on core development vs supporting tasks.	Helps identify hidden context switching or process overhead.
