OVERALL SUMMARY

Ananta Patil's overall score is 27/100, placing them 'At Risk'. While Ananta excels in Backlog Health with a 100% score, demonstrating excellent management of fresh issues, performance in other areas is concerning. Output Velocity at 0 and Throughput Consistency at 10% (25 inactive days) indicate significant risks to timely delivery and consistent contribution.

STRENGTHS

• Backlog Health (100%): Demonstrates exceptional management of issue aging, ensuring no backlog buildup.

AREAS OF CONCERN

• Output Velocity (0): Zero issues closed indicates a complete halt in delivery, posing a risk to project timelines.

• Throughput Consistency (10%): With 25 inactive days, there's a high risk of missed deadlines and inconsistent progress.

ISSUE-LEVEL DETAIL

KEY	SUMMARY	TYPE	CREATED	RESOLVED
		No issues found matching your filter		

INTERPRETATION

- Output Velocity is 0, indicating no issues were closed on average per working day.
- The MoM change is -100%, showing a complete drop in issue closure rate.
- Ranking at the 36th percentile suggests this is a significant underperformance compared to peers.

RECOMMENDATION

- Prioritize closing existing issues to improve the output velocity metric.
- Investigate the root cause for zero issues closed in the last period.
- Focus on completing at least one issue per working day to show progress.

KPI: THROUGHPUT CONSISTENCY

Activity Calendar · 3 / 20 active

ACTIVITY HEATMAP

February 2026

Sun	Mon	Tue	Wed	Thu	Fri	Sat
1	2	3	4	5	6	7
8	9	10	11	12	13	14
15	16	17	18	19	20	21
22	23	24	25	26	27	28

Holiday · Leave · 1–2 issues · 3–5 issues · 6+ issues

INTERPRETATION

- Throughput Consistency is 10%, meaning only 10% of working days had any Jira activity.
- There are 25 inactive days, highlighting a significant lack of consistent engagement.
- The 27th percentile indicates this low activity level is concerning compared to others.

RECOMMENDATION

- Aim for daily Jira updates to increase active days and improve consistency.
- Review the 25 inactive days to understand patterns of disengagement.
- Increase daily task updates to reach at least 50% active days.

INTERPRETATION

- Backlog Health is 100%, suggesting all open issues are within the 0-7 day aging bucket.
- There are no issues older than 7 days, indicating excellent backlog freshness.
- This high score at the 27th percentile means Ananta is performing exceptionally well here.

RECOMMENDATION

- Continue maintaining the strict 7-day aging limit for all open issues.
- Ensure no issues enter the 8-14 day or 30+ day aging buckets.
- Keep up the excellent work in managing backlog freshness and preventing aging.

EDUCATIONAL REFERENCE: GUIDE TO METRICS

Metric	Definition	Performance Context
Issues Closed	The total volume of Jira issues successfully resolved within the assessment period.	Measures overall throughput and delivery capacity.
Avg Res. Time	The average number of working days taken to resolve an issue from creation.	Indicates delivery speed and responsiveness.
Output Velocity	A measurement of daily throughput intensity (Issues per Working Day).	Peak performance tiers maintain >0.6 issues/day.
Stability Score	Measures process reliability by tracking bug reopen rates.	High stability (>85%) indicates strong internal quality control.
Consistency	Analyzes the predictability of daily activity patterns.	Ensures steady delivery without disruptive bottlenecks.
Backlog Health	Evaluates the age and distribution of unresolved work.	Focuses on preventing technical debt and stale tasks.
Efficiency Index	A balanced multiplier comparing speed relative to volume.	Optimizes for high-quality, high-speed delivery.
Focus Ratio	Concentration on core development vs supporting tasks.	Helps identify hidden context switching or process overhead.
